Continuation of 11. does NOT place the application in condition for allowance because: applicant's arguments are not persuasive.

In response to the Final Office Action dated 10/20/2004, applicant argue:

- (1) Hegde does not teach providing access to the high priority access values and only after each of those high priority access values get access, providing access to the lower priority access values [p. 8, lines 8 11];
- (2) there is no teaching or suggestion that high priority processes will be serviced before low priority processes [p. 9, lines 1 2];
- (3) none of the processes are adjusted with a higher priority than others, although some get more bandwidth than others [p. 9, lines 9 10];
- (4) nothing in Hedge teaches or suggest a way that some process, such as process Pa, could be serviced before the other processes [p. 9, lines 11 13]; and
- (5) claim 18 defines a priority value where the high priority request all get granted prior to the low priority requests [p. 9, lines 15 18].

As to argument (1), examiner respectfully disagrees and notes that Hedge teaches providing access to processes with high priority [since Pc has the highest count value, it is the process which is executed first; i.e. col. 7, lines 50 - 54] and only after each of those high priority access values get access, providing access to the lower priority access values [after step 44, one of the processes in the "Others" group is executed in step 36 because it now has the highest count value 5; i.e. col. 8, lines 17 - 22]. Examiner notes that Pc started with a higher value (6) than Po (5) and Pc is executed before Po, which has the second highest value and it is therefore executed next. Additionally, examiner notes that the claims identify the requests as a request to access a shared resource [i.e. claim 18, lines 3 - 4]. Since Hedge teaches providing processes with access to the CPU [i.e. col. 7, lines 54 - 57] and the CPU is a shared resource, execution of the processes in Hedge corresponds to providing access to a shared resource.

In response to arguments (2), (3) and (5), examiner respectfully disagrees and notes that the count value as disclosed in Hedge corresponds to the access values recited in the claims [see previous office action]. Hedge also teaches high [Pc has count value 6; col. 7, lines 45 - 50] and low [Pa has count value 1; col. 7, lines 45 - 50] priority access values. Examiner notes that according to the example provided in columns 7 and 8, Pc is executed before Pa.

As to argument (4), examiner respectfully disagrees and notes that if the count value of Pa is set to 7, then process Pa will be serviced before the other processes [based on the examples in columns 7 and 8].
